

AI TRIAGE SYSTEM

By LogiTech SOLUTIONS

AI SOLUTION

The system will use Artificial Intelligence to analyse shipment information and automatically determine which deliveries are most urgent when delays occur so that they can be delivered in time

Business objectives

The AI helps complete tasks faster and more accurately. From data analysis to customer service, automation saves time and reduces human error.

Problem Definition

Logistics companies in South Africa face frequent delivery delays due to traffic, vehicle breakdowns, weather, and port congestion. When multiple delays occur simultaneously, managers struggle to manually prioritize which shipments need urgent intervention. This lack of automated triage leads to financial losses from spoiled perishable goods, penalties from high-value clients, and poor customer satisfaction.
